No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Nlzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a nucleotide sequence of the invention.

This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the cDNA molecules. As such, these molecules are useful for diagnostic markers or theraparities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene; 88; human; oligo-capping method; diagnostic marker; gene therapy osteoporosis; neurological disease; Alzheimer's disease; parkinson's disease; dementia; short memory; cancer; sense or motor function; emotional reaction; fear response; panic; osteopathic; neuroprotective; nootropic; antiparkinsonian; cytostatic; osteopathic; neuroprotective; nootropic; antiparkinsonian; cytostatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polynucleotide is a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-office.

                                                                                                                              CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polymucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC concers may be used to produce the secreted (I), by inserting the CC mucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polymucleotides may be used to prevent, CC cancers and cancer metastases of haematopoietic derived cells. AAK4703 CC cancers and cancer metastases of haematopoietic acityen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polymucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polymucleotides may be used to produce the secreted (I), by inserting the cCC uncleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polymucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic derived cells. AAK64703 CC to AAK87694 represent human immune/haematopoietic active genomic CC represent sequences used in the exemplification of the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis an treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I)

(I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169

                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) C sequences. (I) is useful as hybridisation probes, polymerase chain C reaction (PCR) primers, oligomers, and for chromosome and gene mapping, C and in recombinant production of (II). The polynucleotides are also used (in diagnostics as expressed sequence tags for identifying expressed (genes. (I) is useful in gene therapy techniques to restore normal (II) activity of (II) or to treat disease states involving (II). (II) is C useful for generating antibodies against it, detecting or quantitating a C useful for generating antibodies against it, detecting or quantitating a C supplement. (II) and its binding partners are useful in medical imaging C involving aberrant protein expression or biological activity. The C diagnostice and polynucleotide sequences have applications in C responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and C amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in C electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś

HANZEL D K. Rank DR,

New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues.

Claim 1; SEQ ID NO 20699; 80pp; English.

CC sequences in the specification, or their complements or fragments, and CC fully defined in the specification, or the 688 amino acid sequences (CC fully defined in the specification. The probe is a single exon probe that (CC hybridiese under high stringency conditions to a nucleic acid molecule (CC expressed in human cells or tissues. Also included are a spatially-CC addressable set of single exon nucleic acid probes for measuring human (CC purobes cited above, where each of the plurality of probes is separately (CC and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of contiguous amino acids of any of the above-mentioned amino acid (CC sequences (optionally with conservative amino acid substitutions), an (CC sequences (optionally with conservative amino acid substitutions), an (CC acustomer desiring to measure gene expression, a method of contiguous amino acids of any of the above-mentioned amino acid storage medium which contains a database having a plurality of records (each record including data on the expression, a method of probes in cluding data by subscription, and a computer-readable compression analysis. The probes may be usef as tools for surveying contentive splicing events, in detecting and characterising contentive splicing events, in detecting and characterising gross alternative splicing events, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human (CC patent did not form part of the princed apecification, but was obtained con alternation format directly from USPTO at (CC sequence data for this expression format directly from USPTO at (CC sequence data for this content and content of the propose are used in the sequence data for this content and content of the propose are used in the sequence data for this content and content of the propose are used content of the sequence and content of the invention. Note: The sequence data for this content of the c The invention relates to a nucleic acid probe for measuring human expression, comprising any of the 27,400 fully defined nucleotide gene

Claim 15; SEQ ID NO 6988; 80pp; English.

CC measuring human gene expression, a vector comprising the single exon CC probe cited above, an ORF-encoded peptide comprising at least 8 CC contiguous amino acids of any of the above-mentioned amino acid CC sequences (optionally with conservative amino acid substitutions), an CC methods of selling and/or licensing single exon probes or microarrays to CC methods of selling and/or licensing single exon probes or microarrays to CC methods of selling and/or licensing single exon probes or microarrays to CC methods of selling to measure gene expression, a method of providing CC human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe CC cited above. The probe, methods and apparatus are useful in gene CC expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their CC specific exon, or in constructing genome-derived single exon microarrays. CC In addition, the probes are used in identifying and characterising gross calternative splicing events, in detecting and characterising gross calternative splicing events, in detecting and characterising gross calternative splicing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence is a human considerated in electronic format directly from USFTO at sequence. html?DocID=20030194704 The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of

                                                                                                                                                                                       CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cattivity, and can be used in gene therapy and vaccine production. (I) CC cattivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-derived cells. AAK4703 CC cancers and cancer metastases of haematopoietic acitigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 cc represent sequences used in the exemplification of the present invention.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis an treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention

For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or delections in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoletic-related diseases, especially cancers and cancer metastases of haematopoletic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoletic antigen genomic sequences from the present invention. AAK54942 to AAK5450 and AAM62169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 476 BP; 59 A; 190 C; 157 G; 70 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             activity, and can be used in gene therapy and vaccine production. (I) composed and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) conjuncted the setted (I), by inserting the polynucleotides may be used to produce the secreted (I), by inserting the mucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and cancer metastases of haematopoietic-related cells. ARK64703 conners and cancer metastases of haematopoietic antigen genomic concers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. ARK54942 to ARK84950 and ARM82169 corporates used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotide (I) and polypeptide (II) CG sequences. (I) is useful as hybridisation probes, polymerase chain CG reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CG and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal CG useful for generating antibodies against it, detecting or quantitating a CG useful for generating antibodies against it, detecting or quantitating a CG useful for generating antibodies against it, detecting or quantitating a CG supplement. (II) and its binding partners are useful in medical imaging CG supplement (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The CG diagnostics, forensics, gene mapping, identification of mutations CG diagnostics, forensics, gene mapping, identification of mutations CG diagnostics, forensics gene mapping, identification of mutations CG amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this control of mutations in the printed specification, but was obtained in CG electronic format directly from WIPO at the control of mutations in the printed specification, but was obtained in CG electronic format directly from WIPO at the control of the

                                                                                                                                                                                                                                                                               The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a [sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple conting that populate a genome. The library comprises several coligonucleotides, each capable of hybridising selectively to a set of coligonucleotide per RNAs transcribed from a given transcripton unit of the genome, which encodes one or more messenger RNA splice variants. The coligonucleotide libraries are useful for detecting mRNAs from a coligonucleotide libraries are useful for detecting mRNAs from a coligonucleotide libraries are useful for detecting mRNAs from a coligonucleotide libraries are useful for detecting mRNAs from a coligonucleotide libraries are useful for detecting mRNAs from a coligonucleotide libraries may also be used as specialised minicular colibraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue coligonucleotide specific genes such as those genes only expressed in coligonucleotide tissue under a specific pathological condition; to detect coligonerate specific genes and to detect man transcripts and splice variants of a transcriptome of a pathent suffering from a particular colisorder. ABN27253 to ABN59589 represent oligonucleotide sequences from corresponding from a particular colores in the exemplification of the present invention. N. RESULT 15
ABK83571/c
              CC (GCA), by detecting the level of expression of gene(s) (GC) and while analysis as given in the specification, and comparing the comparison level to an expression level in an unactivated GC, where CC expression of at less one of Gs is indicative of GCA. Also included are CC modulating (MC) GA by contacting GC with an agent that alters the CC expression of at less tone gene in Gs; (2) screening (M3) for an agent CC tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression CC pathogen or sterile inflammatory disease, by detecting the level of CC expression in a sample of the tissue of gene(s) from Gs, where the level of expression at reile inflammatory disease, by detecting the level of CC expression in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of CC expression in a subject, exposure of in a tissue, an allergic response in a subject to a pathogen or sterile conformation (especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile conformation of the gene is indicative of inflammation; (4) treating CC (MS) an inflammatory disease, by contacting a tissue having inflammation with an CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful CC for screening an agent capable of modulating GCA preferably in an CC inflammation in a tissue; M1 is useful for detecting GA; M3 is useful for detecting GA; M3 is useful for detecting GA; M3 is useful for detecting GCA; M2 is useful for detecting GA; M3 is useful for detecting GCA; M3 is useful GC disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, conditions. The present sequence represents a gene differentially conditions. The present sequence represents a gene differentially disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; 88; granulocytic cell; DNA chip; bacterial infection; viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; crohn's disease; ulcerative colitis; periodontal disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID NO 142; 114pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Beazer-Barclay Y, Weissman SM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    granulocyte activation; chronic inflammation; allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to detecting (M1) granulocyte (GC) activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        markers that is useful for monitoring disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-OCT-2000; 2000US-0237189P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-OCT-2001; 2001WO-US030821

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ន្តន្តន្តន្ត
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                   The invention relates to a method of determining susceptibility of an clinity individual to joint space marrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                         which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                        Sequence 175737 BP; 41985 A; 43790 C; 42407 G; 47555 T; 0 U; 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human soft tissue sarcoma-upregulated DNA - SEQ ID 1753.

                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.

                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, come and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed comes. (I) is useful in gene therapy techniques to restore normal comestivity of (II) or to treat disease states involving (II). (II) is complement. (II) and its binding partners are useful in medical imaging complement. (II) and its binding partners are useful in medical imaging complement. (II) and (II) and (II) are useful for treating disorders of involving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in colypeptide and polynucleotide sequences have application of mutations composible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and contain activity. The sequences of the invention. Note: The sequence data for this contains in the printed specification, but was obtained in contact the printed specification, but was obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The present invention relates to methods for distinguishing between individuals homozygous for and therefore afflicted with Van Buchem's disease, individuals heterozygous for and therefore carriers of Van Buchem's disease and individuals who are not afflicted with Van Buchem's Buchem's disease comprise identifying a large genomic deletion in chromosome 17 at 17g21. The method is useful for identifying individuals who are afflicted with or carriers of diseases associated with one or more genomic
                                                                                                                                                                                                                                    Methods for identifying subjects who are afflicted with or carriers of diseases associated with genomic deletion(s), e.g. Van Buchem's disease by determining the presence of a deletion in the 92 kb region of human chromosome 17 at 17q21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-FEB-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 presence or absence of at least one sclerostin gene region nucleotide polymorphism in a biological sample from a subject where the presence of at least one polymorphism at a position that corresponds to a non-coding region of the 130320 bp sclerostin gene region (SOST) indicates an increased risk of altered BMD. The composition and methods are useful in determining in a subject a risk for having, or presence of, altered bone fracture or other conditions characterized by decreased or increased bone fracture or other conditions characterized by decreased or increased bone density. These may also be used in identifying agents that may be used for treating the above diseases, disorders or conditions associated with altered BMD. In addition, these may be used for pharmacogenomic purposes, e.g. to stratify patient populations according to suitability of a particular therapeutic agent for use in the population. This sequence corresponds to the human sclerostin gene region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SMRT inhibitor; cytostatic; antiinflammatory; antiarthritic; antirheumatic; antisense therapy; inflammatory disorder; rheumatoid arthritis; hyperproliferative disorder; cancer; leukaemia;
                                                                                                                                                                     Novel antisense compound targeted to nucleic acid encoding SMRT (silencing mediator for retinoid and thyroid hormone action), usefu treating animal having disease associated with SMRT such as cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SMRT; silencing mediator for retinoid and thyroid hormone action;

targeted to a nucleic acid molecule encoding SMRT (silencing mediator for retinoid and thyroid hormone action), where (I) specifically hybridises with the nucleic acid molecule encoding SMRT and inhibits expression of SMRT. (I) specifically hybridises with at least 8-nucleobase portion of a preferred target region on nucleic acid molecule encoding SMRT. Also

present invention describes a compound (I) 8-50 nucleobases in length

Example 15;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bloactive agent capable of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (11) for screening of bloactive agent capable of modulating the activity of CAP; (1v) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vi) for neutralizing the effect of CAP; (vii) for treating C carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma hasociated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of Carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 52;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              described is a composition (II) comprising (I) and a carrier or diluent.
(I) and (II) have cytostatic, antiinflammatory, antiarthritic and antirheumatic activities, and can be used in antisense therapy, and as SMRT expression inhibitors. (I) is useful for inhibitors that the expression of SMRT in cells or tissues. (I) is also useful for treating an animal having a disease or condition associated with SMRT, e.g., inflammatory disorder such as rheumatoid arthritis; or a hyperproliferative disorder such as cancer chosen from leukaemia and breast cancer, by inhibiting the expression of SMRT. (I) is useful for diagnostics, therapeutics, prophylaxis and as research reagents and kits. The present sequence represents a partial genomic DNA sequence of human SMRT, which is used in an example from the present invention. N.B. The present sequence is designated as SEQ ID NO:12 in example 15 but corresponds to SEQ ID NO:14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 220756 BP; 42894 A; 60607 C; 65347 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; carcinoma; lymphoma; cancer; human; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genomic sequence hCG25303.

                                                                                       isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antinflammatory; antivicer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, militing aclerosis proteins and ulcorative colities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; breast cancer; ovarian cancer; cytostatic; immunosuppressive; nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease; ds.
                                   disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequences AAF21614 - AAF22031 represent DNA sequences encoding hupoteins AAB59111 - AAB59128. The DNA and protein sequences are associated with Dreast and ovarian cancer. Included in the invent sequences AAF22032 - AAF22040 and AAB59129 which are used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                       cc sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, cc and in recombinant production of (II). The polymucleotides are also used civity of (II) or to treat disease states involving expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc useful for generating antibodies against it, detecting or quantitating a cc polypeptide in tissue, as molecular weight markers and as a food csupplement. (II) and its binding partners are useful in medical imaging co f sites expressing (II). (I) and (II) are useful in medical imaging co sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The collegenties and polymucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cc and to produce other types of data and products dependent on DNA and cambine active types of data and products dependent on DNA and cambine active types of the invention. Note: The sequence data for this collegent in the printed specification, but was obtained in celetronic format directly from MIPO at the print of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SXS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 51;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method (MI) for identifying one or more CC nucleic acid sequences useful as a biomarker for a disease to be detected. (MI) involves identifying nucleic acid sequences comprising CC detected. (MI) involves identifying nucleic acid sequences comprising CC regulated CpG site in promoter-first exon region and that are down-cc regulated in diseased cells, comparing expression level of nucleic acid sequences and controlled con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                     CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) cytoteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For cerample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome concert affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) concert affect caids into a host cell and culturing the cell to express the concert and treat immune/haematopoietic-related diseases, especially concerts and cancer metastases of haematopoietic acids expresent human immune/haematopoietic antigen genomic concerts and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK94950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                      Query Match 1.6%;

                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                  of melanoma. The method comprises detecting the presence or absence of a copymorphic variation associated with melanoma, where the presence of the cone or more polymorphic variations is indicative of the subject being at risk of melanoma. The invention further comprises: a method for identifying a polymorphic variation associated with melanoma; an isolated nucleic acid which comprises a portion of or all of a nucleotide sequence comprising fully defined 68400-213300 base pairs sequences (SEQ ID NO. 3, 4, 5, 6, and/or 7) given in the specification, and comprises one or more polymorphic variations; an oligonucleotide comprising a nucleotide sequence complementary to a portion of the nucleotide sequence above, where the 3' end of the oligonucleotide comprising a nucleotide where the 3' end of the oligonucleotide comprising the isolated nucleic acid linked to a solid support; an isolated polypeptide encoded by the isolated nucleic acid sequence; genotyping a nucleic acid; a method for identifying a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
